## HS aqua Shrimp

**Innovative products for a natural and healthy freshwater shrimp aquarium**

**New!**

In order to help you maximise the enjoyment of your shrimp aquarium, HS aqua has launched a new line of innovative products on the market for a natural and healthy shrimp aquarium.

**HS aqua Shrimp Protect** and **HS aqua Sulawesi Protect** (with KH plus, for fancy shrimp from Sulawesi) are water preparation products for freshwater aquariums with fancy shrimp. The water preparation binds toxic, heavy metals and adds natural colloids to the water. The ingredients in HS aqua Shrimp Protect and HS aqua Sulawesi Protect have disinfecting properties which reduce the chance of bacterial infections in shrimp.

**HS aqua FloraCarbo Shrimp** is a plant food with a carbon source for aquariums with shrimp. The formulation includes amounts of trace and nutritional elements that are not harmful to the sensitive shrimp in your aquarium. CO<sub>2</sub> fertilisation is unnecessary when HS aqua FloraCarbo Shrimp is used.

**HS aqua Crusta Chitin+** is a product made from natural shrimp skin that helps these animals make new skin. The product sinks to the bottom of the aquarium where it slowly dissolves and then adheres to all of the objects in the aquarium, making it easier for the shrimp to consume.

The **HS aqua Shrimp Net** is a shrimp net designed by HS aqua which is an efficient tool for helping you catch your shrimp. Thanks to the net's fine structure, the shrimp will not get entangled in the net.
